TrekTrack: Guided Expedition Booking

By Hazel Lakshmana

TrekTrack: Guided Expedition Booking

Problem

- Trekking information and booking details are often **spread across multiple websites**
- Trekkers find it difficult to locate **itinerary, altitude information, and packing requirements**
- Multi-day treks require **gear rental, permits, and safety preparation**
- Many websites lack a **clear and organized interface for trek planning**

Goal

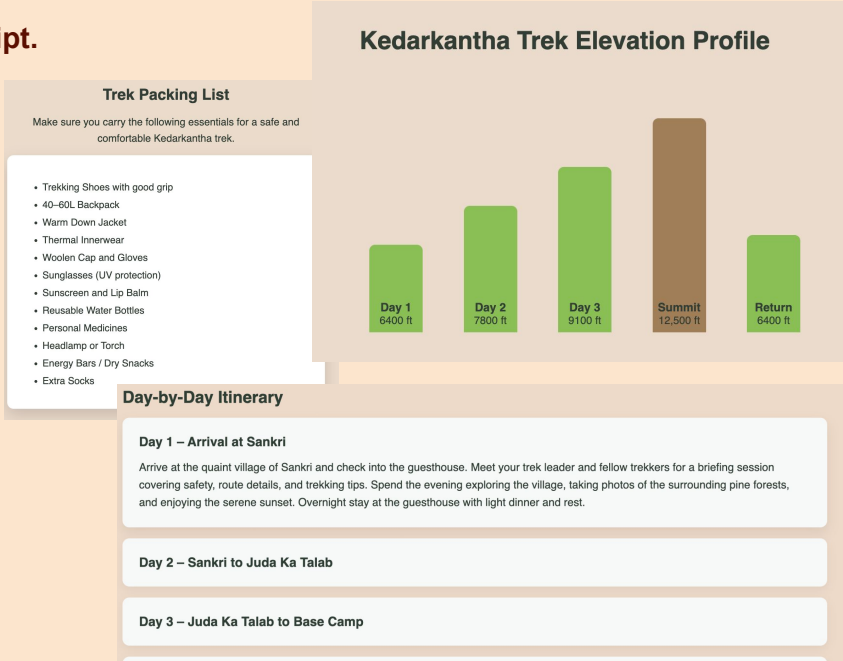
Create a **structured trekking webpage** that organizes trek information and booking options in one place.

Proposed Solution

Developed a trek information webpage using **HTML, CSS,** and **JavaScript.**

Key Features

- **Trek overview and details**
- **Itinerary timeline**
- **Altitude profile visualization**
- **Packing list for trekkers**
- **FAQ section for common questions**
- **Gear rental selection for trekkers**



Example Page

The **Kedarkantha Trek** page is used as a **sample trek page** to demonstrate how other treks can follow the same layout.

Technical Implementation

HTML

- Structured sections for itinerary, altitude chart, and packing list
- Organized webpage layout using semantic elements

CSS

- Outdoor-inspired UI design
- Card layouts and hover effects
- Grid layout for clean and responsive design

JavaScript

- Gear rental checkbox system
- Automatically updates total price dynamically
- Allows users to select trekking equipment easily

Conclusion

- Developed a **structured trekking information webpage**
- Combined **HTML, CSS, and JavaScript** for design and functionality
- Demonstrated trek planning features such as **itinerary, altitude data, packing list, and gear rental**
- Used **Kedarkantha Trek as a sample page**
- The design can be expanded to support **multiple trekking destinations**
